

Making Dancheong pattern

20221124 BoHyun Choi

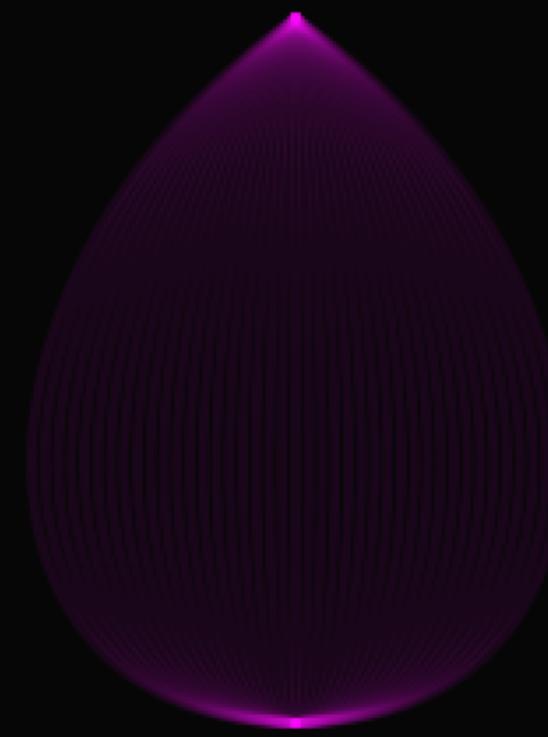

Dancheong

is a traditional Korean pattern.

On the strength of the trend of the emergence of the word "Hip Tradition", which recognizes that tradition is recognized as trendy,

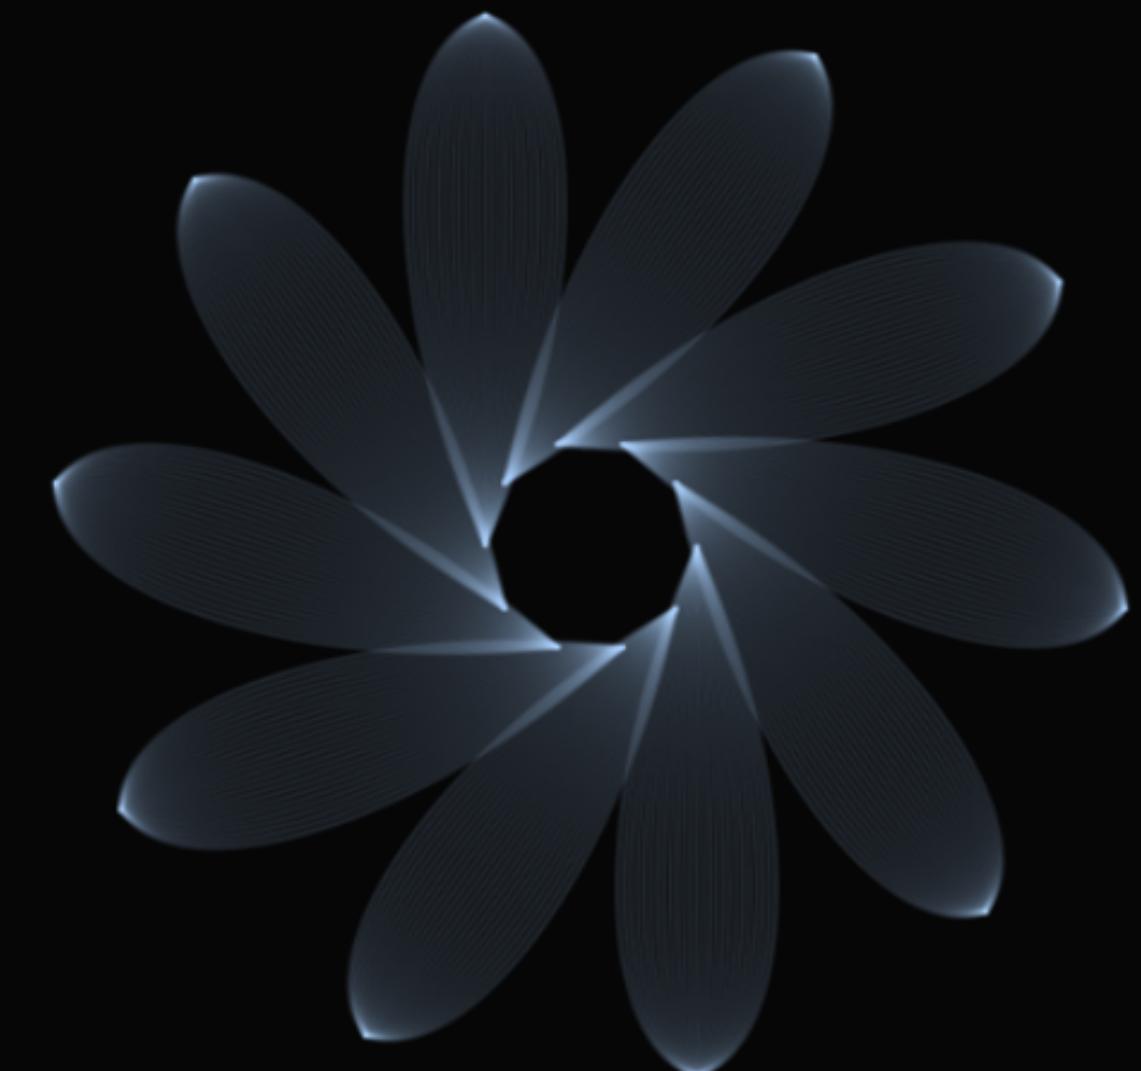

I wanted to **break the stereotype** that
<tradition is old>

through **digital expressions of traditional patterns.**

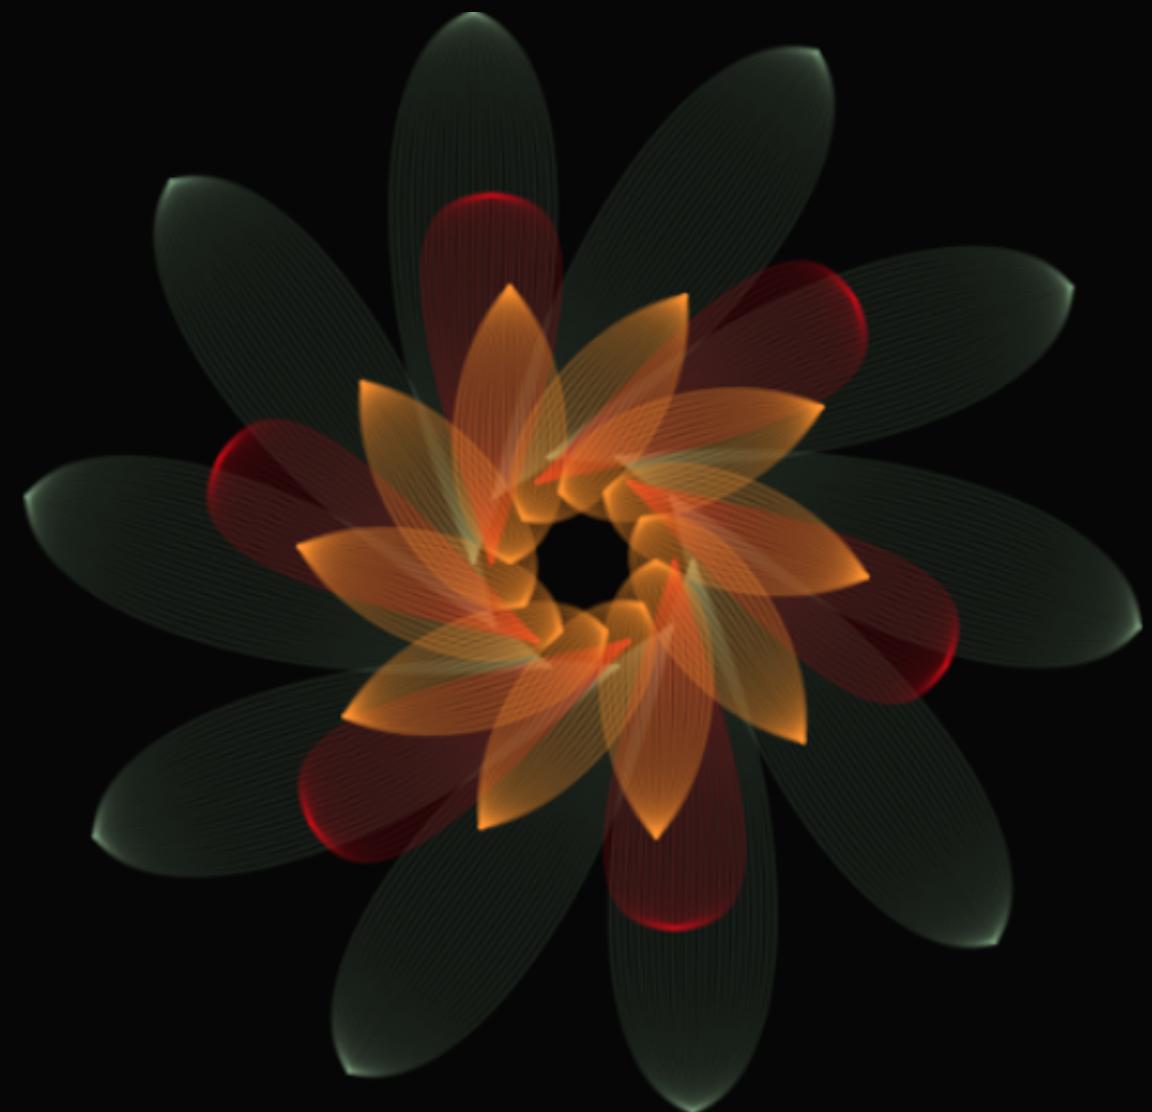

1. Make petal

using bezier()

2. Make flower

using rotate(),translate(),
pushMatrix(),popMatrix()

3. Overlap flowers

using random()

4. Make background

using for loop, polygons

More about...

Please note my project document :)

Details of the code and work are included.

You can check it in p5.js too
